Remember R

SIN / All  
is POS

TAN / COS

$$180^\circ = \pi \text{ rad}$$

$$30^\circ \left( \frac{\pi \text{ rad}}{180^\circ} \right) = \frac{\pi}{6}$$

$$180^\circ = \pi \text{ rad}$$

$$60^\circ = \frac{\pi}{3}$$

$$30^\circ = \frac{\pi}{6}$$

$$15^\circ = \frac{\pi}{12}$$

Trig function for Any Angle

Ex Find  $\theta$  for  $\sin \theta = -0.732$ ,  $0 \leq \theta < 360^\circ$

$$\sin^{-1} 0.732 = 47.1^\circ$$

$$\theta_{ref} = |-47.1^\circ| = 47.1^\circ$$

$$\theta_1 = 180^\circ + \theta_{ref} = 227.1^\circ$$

$$\theta_2 = 360^\circ - \theta_{ref} = 312.9^\circ$$

Ex find  $\theta$  for  $\sec \theta = -1.832$ ,  $0 \leq \theta < 360^\circ$

$$\cos \theta = \frac{1}{\sec \theta} = \frac{1}{-1.832}$$

$$\cos^{-1} \left( \frac{1}{-1.832} \right) = 123.0829^\circ$$

$$\theta_{ref} = 180^\circ - 123^\circ = 57^\circ$$

$$\theta_1 = 180^\circ - 57^\circ = 123^\circ$$

$$\theta_2 = 180^\circ + \theta_{ref} = 237^\circ$$

Ex Find  $\theta$  for  $\tan \theta = -0.783$ ,  $0 \leq \theta < 2\pi$

$$\tan^{-1} -0.783 = -0.664768789 \text{ rad}$$

$$\approx -38.0609^\circ$$

$$\text{ref } \theta = |-0.664768789|$$

$$\theta_1 = 2\pi - \text{ref } \theta = 2.477304$$

$$\theta_2 = 2\pi - \text{ref } \theta = 5.6189652$$

Application of Trig

$s = \text{arclength}$

arc length  $s = r\theta$  in radians  
Unit of measure and radius

$$\text{Area } A = \frac{1}{2} r^2 \theta$$

$$\text{rev} = 2\pi \text{ rad}$$

in radians

3.  $2200 \text{ rev/min}$   $\omega = \frac{2200 \text{ rev}}{\text{min}} \left( \frac{2\pi \text{ rad}}{1 \text{ rev}} \right) \left( \frac{1 \text{ min}}{60 \text{ s}} \right)$   
 Angular velocity?  $= 230 \text{ rad/s}$

$$s = r\theta$$

$$A = \frac{1}{2} r^2 \theta$$

linear velocity  $v = r\omega \rightarrow \frac{\text{angular velocity}}{\text{time}}$   
 $1 \text{ rev} = 2\pi \text{ rad}$  (radius)

1.  $r = 1.2 \text{ m}$   $\theta = 50^\circ$

$$A = \frac{1}{2} (1.2 \text{ s})^2 \left( 50 \left( \frac{\pi}{180} \right) \right)$$

$$=$$

2.  $r = 1.875 \text{ cm}$   $\theta = 165.58^\circ$

$$P = S + 2r$$

$$= r\theta + 2r$$

$$= (1.875) \left( 165.58 \left( \frac{\pi}{180} \right) \right)$$

$$+ 2(1.875)$$

$$= 9.17 \text{ cm}$$

# Trig Graphing

$$y = A \sin(\omega t + \theta) \quad \text{or} \quad y = A \cos(\omega t + \theta)$$

$A$  = Amplitude

$\omega$  = angular velocity =  $2\pi/T$

$T$  = period - period is the time required to cycle

$\theta$  = phase angle

phase shift = P.S. =  $-\theta/\omega$  - start pt

to graph we will use the 5 major quadrants

$0^\circ, 90^\circ, 180^\circ, 270^\circ, 360^\circ$

$0, \frac{\pi}{2}, \pi, \frac{3\pi}{2}, 2\pi$

~ whole thing

EX: Graph  $y = 2 \sin(3t - \frac{\pi}{3})$  (Angle)

$$A = 2, \omega = 3, \theta = -\frac{\pi}{3}, \text{P.S.} = -\frac{-\pi/3}{3} = \pi/9$$

set  $\theta = 0$  to each quadrant angles and solve for time

Starting point

$$1. \quad 3t - \frac{\pi}{3} = 0$$

$$t = \frac{+\pi}{9}$$

$$3. \quad 3t - \frac{\pi}{3} = \pi$$

$$9t = 4\pi$$

$$t = \frac{4\pi}{9}$$

$$2. \quad 9t - \pi = \frac{3\pi}{2}$$

$$18t - 2\pi = 3\pi$$

$$18t = 5\pi$$

$$t = \frac{5\pi}{18}$$

$$4. \quad t = \frac{11\pi}{18}$$

t	y
$\frac{2\pi}{9}$	0
$\frac{5\pi}{18}$	2
$\frac{8\pi}{9}$	0
$\frac{11\pi}{18}$	-2
$\frac{14\pi}{9}$	0

Graph  $y = 3 \cos \left( \frac{1}{2}t + \frac{\pi}{3} \right)$  <sup>Angle</sup>

$A = 3, \omega = \frac{1}{2}, \phi = \frac{\pi}{3}, T = \frac{2\pi}{\omega} = 4\pi$

P.S.  $= -\frac{\phi}{\omega} = -\frac{\pi/3}{1/2} = -\frac{2\pi}{3} \rightarrow \text{start at } P.S.$

1.  $\frac{1}{2}t + \frac{\pi}{3} = 0 \Rightarrow t = \frac{2\pi}{3}$

2.  $\frac{1}{2}t + \frac{\pi}{3} = \frac{\pi}{2} \Rightarrow \frac{1}{2}t = \frac{\pi}{2} - \frac{\pi}{3} = \frac{\pi}{6} \Rightarrow t = \frac{\pi}{3}$

$t = \frac{2\pi}{6}$

t	y
$0$	$3$
$\frac{2\pi}{3}$	$0$
$\frac{4\pi}{3}$	$-3$
$\frac{6\pi}{3}$	$0$
$\frac{8\pi}{3}$	$3$

$t$  |  $y$  | P.S.  $= -\frac{\phi}{\omega} = -\frac{3\pi}{6}$

$\frac{3\pi}{6}$  |  $-5$  |  $T = \frac{2\pi}{\omega} \Rightarrow \frac{3}{2} = \omega$   $A = 5$

$\frac{5\pi}{6}$  |  $0$

$\frac{7\pi}{6}$  |  $5$  |  $3\pi/6 \cdot (-3/2) = \frac{3\pi}{4} = \theta$

$\frac{9\pi}{6}$  |  $0$

$\frac{11\pi}{6}$  |  $-5$

$y = -5 \cos \left( \frac{3}{2}t \right)$
